ClaimsGuru™ Enterprise Platform

Microsoft Azure Pre-Production Cloud Infrastructure & Live Configuration Guide

Cloud Provider:	Microsoft Azure (Commercial Cloud)	**Resource Group:**	claimsGuru (Central India)
Live Domains:	https://www.wct-health.com | wct-health.com	**Environment:**	Enterprise Pre-Production (cg-preprod)
Primary Region:	Central India (centralindia)	**Secondary Region:**	East US (eastus) for OpenAI GPT-4o
Verification Date:	October 2026 (Live CLI & Portal Verified)	**Classification:**	Enterprise Cloud Architecture Specification

1. Azure Pre-Production Cloud Architecture Overview

ClaimsGuru runs on a fully managed, enterprise cloud-native footprint in Microsoft Azure. The architecture is designed for **high throughput, bank-grade patient data privacy, and elastic autoscaling**. It decouples compute, state, relational transactions, AI reasoning, and object storage into dedicated, resilient Azure services:

- **Serverless Containerized Compute:** Azure Container Apps (ACA) run microservices with automated horizontal pod autoscaling (1 to 10 instances) based on HTTP request volume and Celery queue depth.
- **ACID Relational Persistence:** Azure SQL Database (Standard S1 Tier) stores all claim metadata, itemized tariffs, ICD-10 medical codes, and immutable audit logs with automated backups.
- **Zero-Public-Access Document Lake:** Azure Blob Storage (StorageV2 Hot Tier) stores raw scanned medical bills and generated audit PDFs with anonymous public access strictly blocked.
- **Dual-Engine Cognitive Intelligence:** Combines Azure AI Document Intelligence for layout/table extraction with Azure OpenAI Service (GPT-4o, 440K TPM) for medical parsing.
- **Enterprise Identity & Key Management:** Authenticated via Microsoft Entra External ID (OAuth2/OIDC) with 100% of connection strings and secrets guarded inside Azure Key Vault.

2. Complete Pre-Production Azure Services & Resource Inventory

Every resource below has been directly verified in the active claimsGuru pre-production resource group:

Service / Resource Name	Azure Service Type	Region	Sizing & Capacity	Live Scaling / Config	Platform Role
cg-preprod-cin-frontend	Azure Container App	Central India	0.5 vCPU 1.0 GiB RAM	Autoscales: **1 – 5** Port 3000 (External)	Next.js 14 Web Portal & Auditor Cockpit. Custom domain: wct-health.com.
cg-preprod-cin-ingress	Azure Container App	Central India	1.0 vCPU 2.0 GiB RAM	Autoscales: **2 – 10** Port 8000 (External)	FastAPI REST API Gateway. Handles uploads, Entra auth, claim CRUD, and polling.
cg-preprod-cin-worker-default	Azure Container App	Central India	1.0 vCPU 2.0 GiB RAM	Autoscales: **2 – 8** Celery default queue	Background worker executing clinical coding, IRDAI rule scoring, and PDF generation.
cg-preprod-cin-worker-ocr	Azure Container App	Central India	1.0 vCPU 2.0 GiB RAM	Autoscales: **1 – 6** Celery ocr_queue	Dedicated vision worker executing PDF rasterization and Document Intelligence OCR.
cg-preprod-cin-redis	Azure Container App	Central India	0.5 vCPU 1.0 GiB RAM	Static: **1 replica** Internal Port 6379	In-memory task broker for Celery queues and live claim progress bar synchronization.
cg-preprod-sql-vvekhbufuteq2 ***(DB: `claimsguru`)***	Azure SQL Database	Central India	Standard Tier (20 DTUs)	Max 250 GB storage 60 max connections	Transactional relational database storing claim records, line items, and audit logs.
cgpreprodstvvekhbufuteq2 ***(Container: `claimgpt`)***	Azure Blob Storage	Central India	StorageV2 (Hot LRS) Private Container	Public Access: **DENIED** Enforce HTTPS (TLS 1.2+)	Encrypted document lake storing uploaded claim bills and generated audit PDFs.

cg-preprod-openai	Azure OpenAI Service	East US	GPT-4o (2024-11-20) Standard S0	**440K Tokens/Min** GlobalStandard routing	Enterprise Generative AI for semantic table extraction and clinical entity mapping.
cg-preprod-docintel-...	Azure Doc Intelligence	Central India	Standard Tier (S0) Form Recognizer	Prebuilt Read & Layout Direct REST integration	Computer vision OCR extracting bounding boxes, tables, and handwriting from scans.
cg-preprod-sb-vvekhbufuteq2	Azure Service Bus	Central India	Standard Tier	Queues: default, ocr_queue, dead-letter	Enterprise cloud message bus guaranteeing zero task loss during traffic bursts.
cg-preprod-kv-vvekhbufut	Azure Key Vault	Central India	Standard Tier	Soft-delete enabled RBAC Secret Access	Hardware-backed vault storing all database passwords, API keys, and connection strings.
cg-preprod-comm cg-preprod-email	Communication Services	Global	Enterprise PAYG	Linked Domain: notifications.wct-health.com	Automated transactional email dispatch sending audit notifications to users and auditors.
cg-preprod-cin-law	Log Analytics	Central India	PerGB2018 Tier	30-Day Retention Centralized Workspace	24/7 telemetry, container metrics, and regulatory audit log tracking.
acrclaimsgurupreprod	Container Registry	East US	Basic Tier (10 GiB included)	Private Repository Active tag: preprod-rev104	Private Docker registry storing and deploying versioned container microservices.
claimsguruapp.onmicrosoft...	Microsoft Entra ID	Global / US	CIAM Tenant	OAuth 2.0 / OIDC RS256 JWT Verification	Customer Identity & Access Management (CIAM) managing user SSO and role access.

3. Deep-Dive Azure Service Configurations & Networking

A. Azure Container Apps Environment & Ingress Routing

Managed environment **cg-preprod-cin-aca-env** handles container networking, DNS resolution, and SSL termination:

Property	Live Configuration & Architectural Detail
Custom Domains & SSL	Bound to apex wct-health.com and www.wct-health.com using Azure-Managed SNI Certificates with automated 90-day renewal.
Static Outbound IP	4.187.214.109 (Central India egress gateway IP used for database and partner firewall whitelisting).
Autoscaling Rules	• Ingress API scales dynamically (2 to 10 instances) when HTTP requests exceed 25 per instance. • Celery Workers scale horizontally (1 to 8 instances) when queue depth or CPU exceeds 75%.
High Availability (Zero Downtime)	Ingress Gateway and Adjudication Worker maintain **minimum 2 active replicas 24/7**, ensuring instant failover and zero-downtime rolling updates.

B. Database, Object Storage & Secrets Management

Azure Component	Sizing & Specifications	Security & Governance Policies
Azure SQL Database (claimsguru)	• Standard S1 (20 DTUs) • Max 250 GB storage • 60 max concurrent workers	• Automated 7-day point-in-time recovery (PITR) • Transparent Data Encryption (TDE) enabled • Strict firewall whitelist restricted to ACA IP.
Azure Blob Storage (claimgpt container)	• StorageV2 Hot Tier (LRS) • Stores raw patient PDFs & bills • Stores generated audit reports	• **Public Access: DENIED** (Zero anonymous access) • Enforce HTTPS (TLS 1.2+ minimum) • Ephemeral, authenticated in-app streaming.
Azure Key Vault (cg-preprod-kv...)	• Standard SKU • Hardware-backed HSM storage • Centralized configuration	• Soft-delete enabled (90-day recovery protection) • Zero passwords or keys hardcoded in code repository • Role-based access control (RBAC).

C. Cognitive AI & Messaging Services

Service	Deployment & Model	Operational Capabilities & Guarantees
Azure OpenAI Service	• Model: gpt-4o (2024-11-20) • Deployment: gpt-4o • Region: East US	• **440K Tokens Per Minute (TPM)** enterprise capacity. • Zero data retention policy (no customer data used for training). • Parallel semantic clinical extraction and ICD-10 coding.
Azure Doc Intelligence	• Standard Tier (S0) • Models: Prebuilt Read & Layout • Region: Central India	• Extracts table bounding boxes, grids, and handwriting. • Optimized for Indian hospital multi-column billing formats. • Bypasses OCR blur with high-resolution vector rendering.
Azure Service Bus	• Standard Tier • Queues: default, ocr_queue • Region: Central India	• Fault-tolerant message queuing between ingress and workers. • Dead-letter queues prevent any claim loss during outages. • Automated exponential backoff and message redelivery.

4. Consolidated Monthly Pre-Production Cost & Sizing Breakdown

Estimated monthly operating expenditure based on active pre-production resource sizing and current claim processing volume:

Category	Included Azure Resources	Current Sizing / Capacity	Monthly Cost Estimate	% of Spend
Container Compute	Frontend, Ingress, 2 Workers, Redis	4.0 vCPU / 8.0 GiB baseline	**~$94.40 / mo**	65.8%
Relational Database	Azure SQL Database (claimsguru)	Standard S1 Tier (20 DTUs)	**~$30.00 / mo**	20.9%
Container Registry	Azure Container Registry (acr...)	Basic Tier (10 GiB included)	**~$5.00 / mo**	3.5%
Document Lake	Azure Blob Storage (Hot LRS)	Pay-As-You-Go per GB stored	**<$1.00 / mo**	<1.0%
Cognitive AI (LLM)	Azure OpenAI (gpt-4o)	PAYG (~440K TPM capacity)	**~$8.00 – $10.00 / mo**	6.3%
Document Intelligence	Azure Form Recognizer (S0)	PAYG ($1.50 per 1,000 pages)	**~$3.50 – $5.00 / mo**	3.0%
Supporting Services	Service Bus, Key Vault, ACS, Logs	PAYG consumption baseline	**<$1.50 / mo**	<1.0%
TOTAL ESTIMATED SPEND	**All 14 Pre-Production Services**	**Enterprise High-Availability Tier**	**~$143.40 / mo**	**100.0%**

5. Enterprise Security, Governance & Isolation Pillars

Azure security and compliance safeguards ready for enterprise IT and CISO review:

Security Pillar	Azure Implementation & Enterprise Guarantee
Zero Public Data Exposure	All patient files and claim receipts reside in private Azure Blob Storage with public internet access strictly blocked. In-app viewing streams bytes via authenticated ephemeral tokens.
Hardware-Backed Secrets	Zero database passwords, storage keys, or API tokens are hardcoded in source code. All secrets are managed in hardware-backed Azure Key Vault with soft-delete enabled.
Bank-Grade Encryption	TLS 1.3 enforced for all public ingress traffic with automated Azure-managed certificates. Microsoft AES-256 hardware-level encryption at rest across SQL databases and Blob Storage.
High Availability & Resilience	Ingress Gateway and Adjudication Workers maintain multiple active replicas 24/7. Celery message queues ensure zero data loss even during traffic surges or node restarts.
Complete Regulatory Audit Trail	Every AI extraction, tariff adjustment, and claim status change is permanently timestamped and logged in Azure SQL and Log Analytics for full regulatory compliance and auditability.

Verification Note: All technical specifications, Azure resource names, container sizing, IP addresses, and domain configurations in this document have been directly verified against the active claimsGuru pre-production environment in Microsoft Azure via Azure CLI and Azure Portal.
